SUMMARY

Senior Product Designer with 9+ years of experience designing complex, data-heavy digital products across B2B SaaS, AI/ML developer tools, consumer apps, and enterprise platforms. Specialises in token-driven design systems, translating intricate technical logic into accessible user flows, and 0-to-1 MVP delivery.

Experienced in async cross-functional collaboration with global engineering and product teams. Seeking a long-term remote engagement or full-time Product Designer role at an international, remote-first company.

SKILLS

Core Disciplines	Product Thinking, Information Architecture, Interaction Design, Visual Design, Systems Thinking, Prototyping, Usability Testing
Research & Analytics	User Research, Data-Driven Design, Heuristic Evaluation, Hotjar (session recordings, click maps), CJM, A/B Testing, Surveys
Tools	Figma (Variables, Advanced Components, Multi-theme Tokens), Tokens Studio, FigJam, Hotjar, Notion, Miro; HTML/CSS awareness, React & Tailwind (basics)
Collaboration	Design Systems, Async Operations, Cross-Functional Collaboration, Stakeholder Management, Developer Handoff (Figma Dev Mode), Agile/Scrum

WORK EXPERIENCE

Senior Product Designer (Freelance), Self-Employed Apr 2022 – Present

- Partnered with international clients across FinTech, AI/ML developer tools, consumer apps, and B2B SaaS — designing and shipping user-centred products end-to-end, managing research, system architecture, and developer handoff independently in a fully remote context.
- **Strevolut Design System** — Built a component library from scratch: semantic token architecture (Primitive → Semantic → Component, 3 layers), 60+ component sets with full variant coverage and dark-mode support, WCAG 2.1 AA verified, aligned to shadcn/Tailwind for React handoff. *(Public case study → dianaburmistrova.com)*
 - **Overchat** (B2C AI content platform) — Combined heuristic evaluation with Hotjar behavioral data (session recordings, click maps, funnels) to identify drop-off points; delivered a 26-screen hi-fi redesign concept. *(Public case study)*
 - **AIMLAPI** (developer platform, 200+ AI/ML models) — Redesigned information architecture, navigation, and key flows (model browsing, playground, API key management), making a technically complex product accessible to both engineers and non-technical users. *(Public case study)*
 - **AmigoChat** (multi-model AI assistant, 0-to-1) — Led UX architecture from concept to launch: defined key scenarios, ran competitive analysis, and delivered hi-fi prototype resolving fragmentation across multiple AI model integrations. The product subsequently joined Overchat AI in 2025. *(Public case study)*

- **DocuChain** (e-signature + blockchain audit trail) — Mapped trust-critical moments and applied step-based progress indicators, making a complex legal-tech workflow accessible to non-technical users.
- **StarCheck** (crypto AML/KYT risk checker, 0-to-1 MVP) — Designed a two-click check-and-report flow with progressive disclosure, enabling a freemium monetisation model.

Interface Designer · Usethics (IT Consulting & System Integration)

Jun 2017 – Mar 2022

Full design cycle across a wide range of client products — from user research and concept definition to functional prototypes and developer handoff, in a consultancy environment. Usethics was a member of the **UX Fellows** international network of usability agencies (uxfellows.com), participating in cross-cultural research studies.

Selected projects:

- **IVA Connect** (enterprise video conferencing) — redesigned core meeting workflows, simplified navigation, reduced cognitive load for non-technical users in regulated environments
 - **Smart TV set-top box** — full interface redesign
 - **ATM interface** for a mobile operator — designed from scratch
 - **Crypto exchange** — UX prototypes and interaction design
 - **Children's app for autism support** (0-to-1 MVP) — shown to investors
 - Usability reports and actionable recommendations for multiple client products across industries
 - Contributed to a shared design system, ensuring consistency across client products; and many more
-

UX/UI Designer · Tensor (Enterprise ERP — SBIS)

Jan 2015 – Mar 2017

Owned UX/UI for the claims and complaints module of SBIS, a large-scale ERP used by thousands of organisations across Russia.

- Proposed a new internal helpdesk system concept based on competitive analysis and user research.
 - Reduced developer ambiguity by producing detailed user scenarios, animated prototypes, and structured technical specifications.
-

Project Manager · Volga-Web (Web Development Agency)

Jun 2014 – Jan 2015

Delivered web projects on time — client communication, requirements gathering, cross-team coordination.

EDUCATION

Yaroslavl State University (P.G. Demidov)

Specialist Degree in Sociology · 2004–2009

WES ECA for IRCC (Nov 2022, Ref# 5703143IMM) — Canadian Equivalency: Bachelor's + Master's degree

N.P. Pastukhov State Academy of Industrial Management

Re-qualification course: Computer Graphics, Publishing Systems, and Web Design · Sep 2012 – Apr 2013

WES ECA: College-level certificate (one semester)

PROFESSIONAL DEVELOPMENT

- Product Design (UX/UI) Program — DesignerUp (*Feb 2026 – present, in progress*)
- Design Tokens Mastery — Romina Kavčič · The Design System Guide (*Feb 2026 – present, in progress*)
- UX/UI Designer Profession — Uprock School (2022)

- Grids & Website Design — Bang Bang Education (2019)
 - Workshop — Design Line (2018)
 - iOS Mobile App Designer — Igor Dzhazov online intensive (2016)
 - UX Designer — Igor Dzhazov online intensive (2015)
